

# Ecologie Industrielle, WESDE Project

Arthur Nagle  
Ismail Hrimech

## Minute meeting with JYM 10/04/2013

In order to develop a platform dedicated to Industrial Ecology, we asked JYM what tools we could use. We had two issues to discuss:

- We explained that, because of our competences in programming, we have started with HTML+CSS, performing a static webpage, while it requires being dynamic (enable companies to login with a password and posting on the webpage, updating of the newsletter).
- Moreover we had focused much more on the communication and the marketing issue, as we agreed with Stéphanie Romanet, the client.

As we are running short of time, JYM proposed:

- Use of Wordpress, an open source Content Management System, software you can use to manage a blog at first, but with skills relevant enough to build any kind of website. Joomla, another CMS, but less user-friendly.  
→ We would be able to make sessions on the website:
- Newsletter: legal issues with RSS or plugin, better to make a clear quotation with a link to the original article.
